system features.

No additional cost
for new hires and
replacement
personnel.

Defensive Driving
Course Available.

Great Benefits!

Companies can easily administer the training site (or even have multiple administrators). We can brand the site with your logo, and you can control employee access.

You can use our **Occurrence Tracking Module (OTM)** to record and track relevant details of incidents and accidents. The OTM also provides corrective measures, allowing you to assign tasks and follow up on them, track returns to work, record medical visits, and more. You'll also have access to the **Document Centre**, where you can post files. You can limit access to posted files as needed, and track who has opened the file by receipt...a real asset when dealing with Violence and Harassment & other legislative requirements. Other features include:

- **Equipment Maintenance Tracking** - track your equipment and attach maintenance information for each piece.
- **Report & Certificate Printing** – print or electronically file a variety of reports and issue certificates.
- **Employee Wellness Program** - individual employees can share courses like fire safety, back & lifting safety and ladder safety with their family.
- **Auto Notification Email System** - WebWSIT intuitively and automatically advises employees when they have been assigned a course, have not completed a course, when re-certification is required, when documents have been assigned to read and acknowledge and much more.
- **Client Generated Learning Outcomes** - Input and track client generated test and practical outcomes the same as WebWSIT courses with re-certification notifications. Also input professional designations, licences, permits etc. and track status automatically.
- **Plate-forme bilingue:** La plate-forme WebWSIT est totalement bilingue et peut passer de l'Anglais au Français avec un simple click de la souris. Vous permet de voir toutes les fonctions en Français.
